ABSTRACT

There are many types of tax payment in government of Tamil Nadu online bill payments. Like EB Tax, Water Tax, Service Tax, Income Tax, Property Tax, and Telephone Tax. The above mentioned taxes are only payable at their responsible places. But now the user can pay all those taxes at the single site. Also by implementing this application we can get the exact information immediately by getting the statement bills. However the manpower will get reduced by a single user to control all activations. The legal definition and the economic definition of taxes differ in that economists do not consider many transfers to governments to be taxes. Some transfers to the public sector are comparable to prices and fees for utilities provided by governments. Yet compulsory transfer of resources from the private to the public sector levied on a basis of predetermined criteria and without reference to specific benefit received. Provide hassle free one-stop solution to the citizen. Minimize multiple interaction points for the citizen and hence reducing the wastage of their valuable time provide better turnaround time in receipt, processing and issue of services. We implement the payable taxes are:

- *Electricity Bill Tax Water Tax Service Tax*
- *Income Tax Property Tax Telephone Tax.*

Keywords: E-Commerce Security, Online Fun Transfer, Verification Of Amount From Seller And Customer, Commercial Tax, Authentication

I. INTRODUCTION

The vision for this project is to create a knowledge-based society through extensive use of I.T. as a medium for effective interaction between the Administration and the public so that exchange of information and access to government departments is speedy and easy, leading to a better quality of life. Provide hassle free one-stop solution to the citizen. Minimize multiple interaction points for the citizen and hence reducing the wastage of their valuable time provide better turnaround time in receipt, processing and issue of services.

II. SYSTEM STUDY

2.1 Existing System

Before this initiative the common man had to make multiple visits for a single transaction apart from standing in long queues and wait for a few days to few weeks for the end result. At times he had to face harassment due to lack of transparency. After this initiative the Administration was successful in providing a one stop solution at the e-payment as various services, which were available earlier at independent islands and sometimes resulted in duplication of work, are being delivered at these centers. The processing time has been minimized as the efficiency of the service delivery system has been optimized by making it I.T. enabled thereby regarding eradicating the long queues and waiting hours for the public.

2.1.1 Disadvantages

- Time Consuming process
- Lack of transparency.

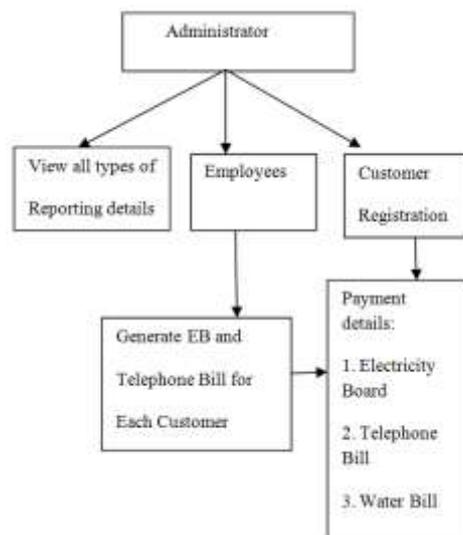

2.2 Proposed System

E-Payment facility of Central Excise and Services Tax is a part of the e-Government initiatives. The issue of on-line payment of Central Excise and Service Tax through the internet portals of various banks had been under consideration. The system requirements, methodology and suggested process flow was developed, without having any implication of the existing procedure of the executive and accounting agencies of the Department, and given to banks for suggesting the solutions. While most of the banks have intimated their acceptance of providing this option, and are developing the solutions at their IT Departments, 7 Banks have so far come up with the necessary software.

2.2.1 Advantages

- Facility is available 24 X 7 bases.
- One can pay on behalf of the firm, company and others.
- Online payment of taxes, no more queues and waiting.
- Filling of one single challah.
- Instant cyber receipts for payments made.

III. SYSTEM ARCHITECTURE

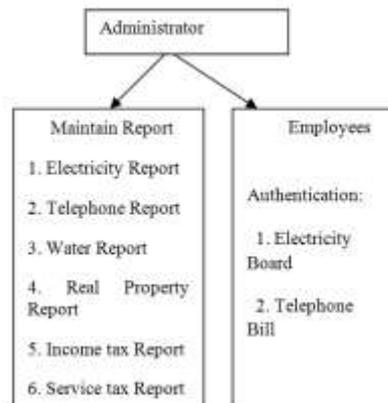

IV. MODULES

- Administrator
- Employees Page
- Customer Registration
- Electricity Board
- Telephone Bill
- Water Tax
- Real Property Tax
- Income Tax
- Service Tax

V. MODULES DESCRIPTION

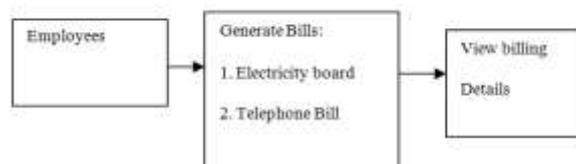

5.1 Administrator

The role includes the development and design of database strategies, monitoring and improving database performance and capacity, and planning for future expansion requirements. Co-ordinate and implement security measures to safeguard the database. The duty or duties of an administrator in exercising the executive every functions of this position. The performance and operations and thus the making or implementing of a major decision. Administration can be defined as the universal process of organizing people and resources efficiently so as to direct activities toward common goals and objectives.

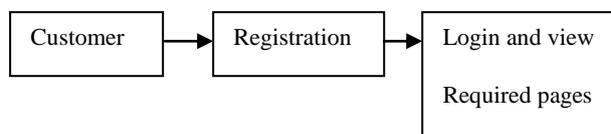

5.2 Employees Page

A person who is generates to provide services to a government bills on a regular basis work for compensation.

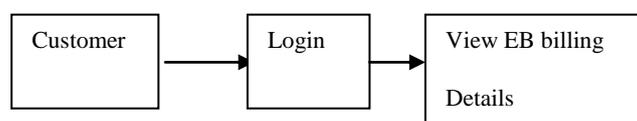

5.3 Customer Registration

When you first access a site store, you see a 'Register' link at the top of the screen next to the Login field. The fields in this scenario relate to the registration form that customers complete in order to become a registered user of the site.

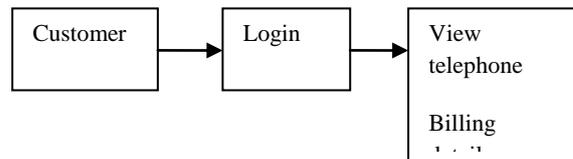

5.4 Electricity Board

View Current Bill (Full Bill). Go to the Bill & Payments page in my account & transfer amount. An e-payment transaction may be defined as one in which monetary value is transferred electronically or digitally between two entities. However it is obvious that any payment that is not transacted by paper based instruments is considered e-payment transactions.

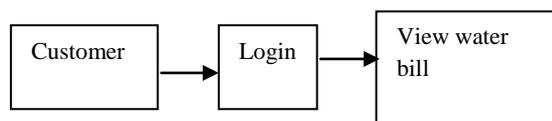

5.5 Telephone Bill

To which all telephone numbers of a customer (subscriber) are charged in a consolidated telephone bill, instead of showing charges under each telephone number. Also called billed telephone number.

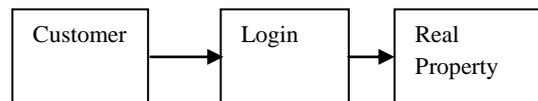

5.6 Water Tax

Water tax payments for every six months pay in online. To view your account information or pay your bill you will need to provide a valid account number. This number can be located on a printed copy of your water bill. If you would like to store your account information you will first need to create an account.

5.7 Real Property Tax

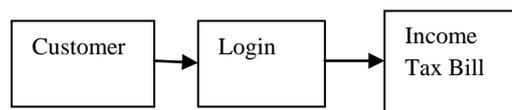

Real property is property that includes land and buildings, and anything affixed to the land. For a business, real property would include warehouses, factories, offices, and other buildings owned by the business. Real property only includes those structures that are affixed to the land, not those which can be removed, such as equipment.

5.8 Income Tax

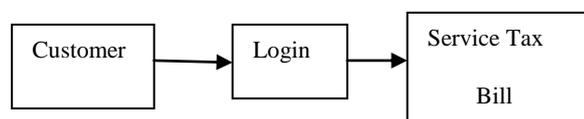

This module is determined by applying a tax rate, which may increase as income increases, to taxable income as defined. Individuals and corporations are directly taxable, and estates and trusts may be taxable on undistributed income. Partnerships are not taxed, but their partners are taxed on their shares of partnership income. Residents and citizens are taxed on worldwide income, while nonresidents are taxed only on income within the jurisdiction. Several types of credits reduce tax, and some types of credits may exceed tax before credits. An alternative tax applies at the Federal and some state levels.

Taxable income is total income less allowable deductions. Income is broadly defined. Most business expenses are deductible. Individuals may also deduct a personal allowance (exemption) and certain personal expenses, including home mortgage interest, state taxes, contributions to charity, and some other items. Some deductions are subject to limits

5.9 Service Tax

This module provided in relation to promotion or marketing of service provided by the client is leviable to service tax under business auxiliary service. Marketing or promotion means activities which are directed towards furtherance of sale.

VI. CONCLUSION

The online payment mode based on has a lot of limitations, such as interface standard, security authentication, payment and business process, data to deposit in his own way and across banking payment obstacle. This online payment mode meet development needs of e-business in our country. So we must perfect the mode to solve a great deal of problems existing at present. The concrete thinking is as follows:

1. Set up unified interface standard. Unify the interface between the commercial banking systems; unify the interface between the customer application systems. This can make data message which the entities transmit discerned by each other.
2. Set up the unified security authentication process, and guarantee the security of online business.
3. Set up the unified trade and payment process, and preserve data with the same form. Combine the Three Flows of e-business to realize the information resource sharing.
4. Solve across banking payment obstacle. This may involve the transformation of the baking business system, and also need to upgrade CNAPS. Then this can make them meet the need of online payment.
5. Carry on the transformation, set up database for against the money laundering and fraud.

This enables the country to supervise the flow-direction of fund, to attack the crime of money laundering and fraud.

VII. FUTURE ENHANCEMENT

In feature this implementation accesses any ware and any time. Once deploy the project in real time after that user can access any ware and any time using any of the browsers. Once register the user details and then all taxes pay within one place.
