ABSTRACT

The present manuscript deals with an account of plant of Mathura Distt.(U.P.) used to cure urine infection. The information is obtain by interview and contact during field trips with local people, medicine man, vaidyas. The plants are arranged alphabetically along with their botanical name family vernacular name and uses.

Keyword: *Ethanobotany, Plant, Verenal Diseases*

I INTRODUCTION

From the time immemorial people have been using herbal medicine in India. The knowledge of these medicine in being lost as traditional culture due to shifting to rural young man to urban areas, thus there is an urgent need of conservation of this knowledge. People residing in harmony with the vegetation around know herbal remedy almost for every ailment .These folk medicine definitely help in relieving from many disease (Archana sadhle 1989).

Urine infection are very common in the summer season. When human used public toilet in traveling and verenal disease by less awareness, the present paper deals with an account of 14 plants of district Mathura (UP) used to cure urine infection.

The literature indicates that so far very little work has been done on Ethanobotony of Mathura Distt as such expect Singh (1980) . The work of Kirtikar Basu (1971) Chopra *et. al.* (1958) Jain (1981) are Noteworthy.

II MATERIAL AND METHOD

The data put on forth below is based upon information collected from local people medicine man and vaidyas at various placed in Distt.Mathura (UP). The plant along with botanical name family vernacular name and its used are arranged alphabetically.

2.1 List of Plant

(1) *Abutilon indicum* (Linn) sweet. L.N. Kanghi, Atibala

An under shrub, more branched. Leaves ovate to orbicular-cordate, simple alternate. Flowers yellow, on long pedicels, seeds dark brown, minutely stellate hairy.

Used- Dried powder of entire plants is used in urinary troubles.

(2) *Azadirachta indica* (A.juss) L.N. Neem

A large tree straight trunk and many braches. Leaves crowded near the end of the braches, pinnate, flowers white, droupes ovoid-oblong, smooth yellow when ripe.

Used- Its leaf powder and bark powder mixed with mustard oil and applied on gonad in case of infection.
